

WORLD SCIENTISTS' WARNING TO HUMANITY

INTRODUCTION Human beings and the natural world are on a collision course. Human activities inflict harsh and often irreversible damage on the environment and on critical resources. If not checked, many of our current practices put at serious risk the future that we wish for human society and the plant and animal kingdoms, and may so alter the living world that it will be unable to sustain life in the manner that we know. Fundamental changes are urgent if we are to avoid the collision our present course will bring about.

THE ENVIRONMENT The environment is suffering critical stress:

The Atmosphere Stratospheric ozone depletion threatens us with enhanced ultraviolet radiation at the earth's surface, which can be damaging or lethal to many life forms. Air pollution near ground level, and acid precipitation, are already causing widespread injury to humans, forests, and crops.

Water Resources Heedless exploitation of depletable groundwater supplies endangers food production and other essential human systems. Heavy demands on the world's surface waters have resulted in serious shortages in some 80 countries, containing 40 percent of the world's population. Pollution of rivers, lakes, and groundwater further limits the supply.

Oceans Destructive pressure on the oceans is severe, particularly in the coastal regions which produce most of the world's food fish. The total marine catch is now at or above the estimated maximum sustainable yield. Some fisheries have already shown signs of collapse. Rivers carrying heavy burdens of eroded soil into the seas also carry industrial, municipal, agricultural, and livestock waste—some of it toxic.

Soil Loss of soil productivity, which is causing extensive land abandonment, is a widespread by-product of current practices in agriculture and animal husbandry. Since 1945, 11 percent of the earth's vegetated surface has been degraded—an area larger than India and China combined—and per capita food production in many parts of the world is decreasing.

Forests Tropical rain forests, as well as tropical and temperate dry forests, are being destroyed rapidly. At present rates, some critical forest types will be gone in a few years, and most of the tropical rain forest will be gone before the end of the next century. With them will go large numbers of plant and animal species.

Living Species The irreversible loss of species, which by 2100 may reach one-third of all species now living, is especially serious. We are losing the potential they hold for providing medicinal and other benefits, and the contribution that genetic diversity of life forms gives to the robustness of the world's biological systems and to the astonishing beauty of the earth itself.

Much of this damage is irreversible on a scale of centuries, or permanent. Other processes appear to pose additional threats. Increasing levels of gases in the atmosphere from human activities, including carbon dioxide released from fossil fuel burning and from deforestation, may alter climate on a global scale. Predictions of global warming are still uncertain—with projected effects ranging from tolerable to very severe—but the potential risks are very great.

Our massive tampering with the world's interdependent web of life—coupled with the environmental damage inflicted by deforestation, species loss, and climate change—could trigger widespread adverse effects, including unpredictable collapses of critical biological systems whose interactions and dynamics we only imperfectly understand.

Uncertainty over the extent of these effects cannot excuse complacency or delay in facing the threats.

POPULATION The earth is finite. Its ability to absorb wastes and destructive effluent is finite. Its ability to provide food and energy is finite. Its ability to provide for growing numbers of people is finite. And we are fast approaching many of the earth's limits. Current economic practices which damage the environment, in both developed and underdeveloped nations, cannot be continued without the risk that vital global systems will be damaged beyond repair.

Pressures resulting from unrestrained population growth put demands on the natural world that can overwhelm any efforts to achieve a sustainable future. If we are to halt the destruction of our environment, we must accept limits to that growth. A World Bank estimate indicates that world population will not stabilize at less than 12.4 billion, while the United Nations concludes that the eventual total could reach 14 billion, a near tripling of today's 5.4 billion. But, even at this moment, one

person in five lives in absolute poverty without enough to eat, and one in ten suffers serious malnutrition.

No more than one or a few decades remain before the chance to avert the threats we now confront will be lost and the prospects for humanity immeasurably diminished.

WARNING We the undersigned, senior members of the world's scientific community, hereby warn all humanity of what lies ahead. A great change in our stewardship of the earth and the life on it is required, if vast human misery is to be avoided and our global home on this planet is not to be irretrievably mutilated.

WHAT WE MUST DO Five inextricably linked areas must be addressed simultaneously:

1. We must bring environmentally damaging activities under control to restore and protect the integrity of the earth's systems we depend on. We must, for example, move away from fossil fuels to more benign, inexhaustible energy sources to cut greenhouse-gas emissions and the pollution of our air and water. Priority must be given to the development of energy sources matched to Third World needs—small-scale and relatively easy to implement.

We must halt deforestation, injury to and loss of agricultural land, and the loss of terrestrial and marine plant and animal species.

2. We must manage resources crucial to human welfare more effectively. We must give high priority to efficient use of energy, water, and other materials, including expansion of conservation and recycling.

3. We must stabilize population. This will be possible only if all nations recognize that it requires improved social and economic conditions, and the adoption of effective, voluntary family planning.

4. We must reduce and eventually eliminate poverty.

5. We must ensure sexual equality, and guarantee women control over their own reproductive decisions.

The developed nations are the largest polluters in the world today. They must greatly reduce their overconsumption, if we are to reduce pressures on resources and the global environment. The developed nations have the obligation to provide aid and support to developing nations, because only the developed nations have the financial resources and the technical skills for these tasks.

Acting on this recognition is not altruism, but enlightened self-interest: whether industrialized or not, we all have but one lifeboat. No nation can escape from injury when global biological systems are damaged. No nation can escape from conflicts over increasingly scarce resources. In addition, environmental and economic instabilities will cause mass migrations with incalculable consequences for developed and undeveloped nations alike.

Developing nations must realize that environmental damage is one of the gravest threats they face, and that attempts to blunt it will be overwhelmed if their populations go unchecked. The greatest peril is to become trapped in spirals of environmental decline, poverty, and unrest, leading to social, economic, and environmental collapse.

Success in this global endeavor will require a great reduction in violence and war. Resources now devoted to the preparation and conduct of war—amounting to over \$1 trillion annually—will be badly needed in the new tasks and should be diverted to the new challenges.

A new ethic is required—a new attitude towards discharging our responsibility for caring for ourselves and for the earth. We must recognize the earth's limited capacity to provide for us. We must recognize its fragility. We must no longer allow it to be ravaged. This ethic must motivate a great movement, convincing reluctant leaders and reluctant governments and reluctant peoples themselves to effect the needed changes.

The scientists issuing this warning hope that our message will reach and affect people everywhere. We need the help of many.

We require the help of the world community of scientists—natural, social, economic, political;

We require the help of the world's business and industrial leaders;

We require the help of the world's religious leaders; and

We require the help of the world's peoples.

We call on all to join us in this task.

SELECTED SIGNERS OF THE WARNING

In 1992, the Union of Concerned Scientists sent the World Scientists' Warning for endorsement to all scientists worldwide who had been awarded the Nobel Prize, and to national academy-level scientists in Africa, Canada, China, Europe, India, Japan, Latin America, Russia, the United Kingdom, and the United States.

Over 1700 scientists, including 104 Nobel laureates—a majority of the living recipients of the Prize in the sciences—signed the Warning. These men and women represent 71 countries, including all of the 19 largest economic powers, all of the 12 most populous nations, 12 countries in Africa, 14 in Asia, 19 in Europe, and 12 in Latin America. Below is a list of some of the scientists who signed the Warning.

Anatole Abragam, France	*Baruch Blumberg, USA
Carlos Aguirre, Bolivia	Bert Bolin, Sweden
Bruce Alberts, USA	*Norman Borlaug, USA
Walter Alvarez, USA	Frederick Bormann, USA
Viqar Uddin Ammad, Pakistan	Raoul Bott, USA
Claude Allegre, France	Ronald Breslow, USA
Michael Alpers, Papua New Guinea	Ricardo Bressani, Guatemala
Anne Anastasi, USA	Hermann Brück, Great Britain
*Philip Anderson, USA	Gerardo Budowski, Costa Rica
*Christian Anfinsen, USA	E. Margaret Burbidge, USA
How Ghee Ang, Singapore	Robert Burris, USA
*Werner Arber, Switzerland	Glen Burton, USA
Mary Ellen Avery, USA	*Adolf Butenandt, Germany
*Julius Axelrod, USA	Sergio Cabrera, Chile
Michael Atiyah, Great Britain	Paulo C. Campos, Philippines
Howard Bachrach, USA	Ennio Candotti, Brazil
John Backus, USA	Henri Cartan, France
Achmad Baiquini, Indonesia	Carlos Chagas, Brazil
*David Baltimore, USA	Sivaramakrishna Chandrasekhar, India
H. A. Barker, USA	*Georges Charpak, France
Francisco J. Barrantes, Argentina	Joseph Chatt, Great Britain
David Bates, Ireland	Shiing-Shen Chern, China
Alan Battersby, Great Britain	Christopher Chetsanga, Zimbabwe
*Georg Bednorz, Switzerland	Morris Cohen, USA
*Baruj Benacerraf, USA	*Stanley Cohen, USA
Germot Bergold, Venezuela	Stanley N. Cohen, USA
*Sune Bergstrom, Sweden	Mildred Cohn, USA
Daniel Bes, Argentina	*E. J. Corey, USA
*Hans Bethe, USA	*John Cornforth, Great Britain
Arthur Birch, Australia	Hector Croxatto, Chile
*Michael Bishop, USA	Paul Crutzen, Germany
*Konrad Bloch, USA	Partha Dasgupta, Great Britain
*Nicholaas Bloembergen, USA	*Jean Dausset, France
David Mervyn Blow, Great Britain	Ogulande Robert Davidson, Sierra Leone
	Margaret Davis, USA

* Nobel laureate

Luis D'Croz, Panama	Eleanor J. Gibson, USA	Robert Kates, USA	*César Milstein, Argentina
*Gerard Debreu, USA	Marvin Goldberger, USA	Frederick I. B. Kayanja, Uganda	*Franco Modigliani, USA
*Pierre-Gilles de Gennes, France	Maurice Goldhaber, USA	Joseph Keller, USA	Andrei Monin, Russia
*Hans Dehmelt, USA	*Donald Glaser, USA	*Henry Kendall, USA	Marcos Moshinsky, Mexico
*Johann Deisenhofer, Germany	*Sheldon Glashow, USA	*John Kendrew, Great Britain	*Nevill Mott, Great Britain
Frederica de Laguna, USA	James Gowans, France	Elisabeth Kessler, Sweden	Teruaki Mukaiyama, Japan
Paul-Yves Denis, Canada	Roger Green, New Zealand	Maung-U Khin, Myanmar	Walter Munk, USA
Pierre Deligne, France	Peter Greenwood, Great Britain	Gurdev Khush, India	Anne Murray, Sweden
Frank Dixon, USA	Edward Goldberg, USA	Susan Kieffer, USA	*Joseph Murray, USA
Johanna Döbereiner, Brazil	Coluthur Gopalan, India	*Klaus von Klitzing, Germany	Noreen Murray, Great Britain
Joseph Doob, USA	Stephen Jay Gould, USA	*Aaron Klug, Great Britain	Lawrence Mysak, Canada
*Renato Dulbecco, USA	*Roger Guillemin, USA	E. F. Knipling, USA	Jayant Vishnu Narlikar, India
Heneri Dzinotyiweyi, Zimbabwe	Herbert Gutowsky, USA	Walter Kohn, USA	Anwar Nasim, Saudi Arabia
*Manfred Eigen, Germany	Erwin Hahn, USA	Janos Kornai, Hungary	Kim Nasmyth, Great Britain
Samuel Eilenberg, USA	Gonzalo Halffter, Mexico	Aderemi Kuku, Nigeria	James Neel, USA
Mahdi Elmandjra, Morocco	Kerstin Hall, Sweden	Ikuo Kushiro, Japan	*Louis Néel, France
Paul Ehrlich, USA	Mohammed Ahmed Hamdan, Jordan	Devendra Lal, India	Yuval Ne'eman, Israel
Thomas Eisner, USA	Adnan Hamoui, Kuwait	Gerald Cecil Lalor, Jamaica	Oleg M. Nefedov, Russia
Mohammed T. El-Ashry, Egypt	A. M. Harun-A Rashid, Bangladesh	Gerardo Lamas-Muller, Peru	*Erwin Neher, Germany
*Gertrude Elion, USA	Mohammed H. A. Hassan, Sudan	Torvard Laurent, Sweden	*Marshall Nirenberg, USA
Aina Elvius, Sweden	Ahmed Hassanli, Tanzania	*Leon Lederman, USA	Yasutomi Nishizuka, Japan
K. O. Emery, USA	*Herbert Hauptman, USA	Sang Soo Lee, Rep. of Korea	John S. Nkoma, Botswana
Paul Erdos, Hungary	Stephen Hawking, Great Britain	*Yuan T. Lee, USA	Paul Nchoji Nkwi, Cameroon
*Richard Ernst, Switzerland	Elizabeth Hay, USA	Susan Leeman, USA	Howard Odum, USA
Vittorio Erspamer, Italy	*Dudley Herschbach, USA	*Jean-Marie Lehn, France	Bede Nwoye Okigbo, Nigeria
Sandra Faber, USA	*Gerhard Herzberg, Canada	*Wassily Leontief, USA	Ayub Khan Ommaya, Pakistan
Nina Fedoroff, USA	*Antony Hewish, Great Britain	Luna Leopold, USA	Cyril Agodi Onwumechili, Nigeria
Herman Feshbach, USA	*George Hitchings, USA	Louis Leprince-Ringuet, France	Mary Jane Osborn, USA
*Ernst Otto Fischer, Germany	*Dorothy Crowfoot Hodgkin, Great Britain	Vladilen Letokhov, Russia	Yuri Ossipyan, Russia
Inga Fischer-Hjalmars, Sweden	*Roald Hoffman, USA	*Rita Levi-Montalcini, USA	Autar Singh Paintal, India
Michael Ellis Fisher, Great Britain	*Robert Holley, USA	Li Chang-lin, China	George Pake, USA
*Val Fitch, USA	Nick Holonyak, USA	Shan Tao Liao, China	*George Palade, USA
Dagfinn Follesdal, Norway	Lars Hormander, Sweden	*William Lipscomb, USA	Mary Lou Pardue, USA
*William Fowler, USA	Dorothy Horstmann, USA	Jane Lubchenco, USA	*Linus Pauling, USA
Otto Frankel, Australia	John Houghton, Great Britain	Christopher Magazda, Zimbabwe	Barbara Pearse, Great Britain
Herbert Friedman, USA	Sarah Hrdy, USA	Lydia Phindile Makhubu, Swaziland	Muhammed Abed Peeryally, Mauritius
*Jerome Friedman, USA	Kenneth Hsu, China	Khursheed Ahmad Malik, Pakistan	Manuel Peimbert, Mexico
Konstantin V. Frolov, Russia	Kun Huang, China	Lynn Margulis, USA	Roger Penrose, Great Britain
*Kenichi Fukui, Japan	Hiroshi Inose, Japan	Paul Marks, USA	John Philip, Australia
Madhav Gadgil, India	Turner T. Isoun, Nigeria	George Martine, Brazil	Lilian Pickford, Great Britain
Mary Gaillard, USA	*François Jacob, France	Frederico Mayor, Spain	John R. Pierce, USA
*D. Carleton Gajdusek, USA	Carl-Olof Jacobson, Sweden	Ernst Mayr, USA	*John Polanyi, Canada
Robert Gallo, USA	Dorothea Jameson, USA	Maclyn McCarty, USA	*George Porter, Great Britain
Rodrigo Gamez, Costa Rica	Daniel Janzen, USA	James McConnell, Ireland	*Ilya Prigogine, Belgium
Antonio Garcia-Bellido, Spain	Cecilia Jarlskog, Sweden	Digby McLaren, Canada	Giampietro Puppi, Italy
Leopoldo Garcia-Collin, Mexico	Louise Johnson, Great Britain	*James Meade, Great Britain	*Edward Purcell, USA
Percy Garnham, Great Britain	Harold Johnston, USA	Jerrold Meinwald, USA	Atta ur-Rahman, Pakistan
Richard Garwin, USA	Victor A. Kabanov, Russia	M. G. K. Menon, India	G. N. Ramachandran, India
*Murray Gell-Mann, USA	*Jerome Karle, USA	Gennady Mesiatz, Russia	Tiruppattur Ramakrishnan, India
Georgii Georgiev, Russia		Jan Michalski, Poland	
Humam Bishara Ghassib, Jordan		*Hartmut Michel, Germany	
Ricardo Giacconi, USA		Brenda Milner, Canada

**About the Union of
Concerned Scientists**

The Union of Concerned Scientists (UCS) is dedicated to advancing responsible public policies in areas where science and technology play a critical role. Established in 1969, UCS has created a unique alliance between many of the United States' leading scientists and thousands of committed citizens. This partnership addresses the most serious environmental and security threats facing humanity.

UCS is currently working to encourage responsible stewardship of the global environment and life-sustaining resources; promote energy technologies that are renewable, safe, and cost effective; reform transportation policy; promote sustainable agriculture; and curtail weapons proliferation. An independent nonprofit organization, UCS conducts technical studies and public education, and seeks to influence government policy at the local, state, federal, and international levels.

For information about UCS and our work, visit the UCS site on the World Wide Web at <http://www.ucsusa.org>. Or you may call us at 617-547-5552 or send us an e-mail at ucs@ucsusa.org.
