## Foreword

"A Bible - should we read one or write one - this is the question!"

Antti Lukats

A Bible is a special book made up of stories. One major difference from regular books is that the Bible was not written for direct financial gain, while most books are written in the hope that it pays back in terms of money. Therefore, writing a Bible is even easier than writing a (normal) book - we do not need to worry about the sales! In addition, there is no need for a single theme for the book, just a collection of shorter stories is sufficient. Antti Bible seeks no financial gain; it is written because I wanted to write it. In the hope that my children will read it. That is all that matters.

My name is Antti, so my Bible is an "Antti Bible"!

What can be better than writing a Bible? Yes, it is better to write two Bibles! My second Bible is named "FPGA Bible". That Bible is deep technical about FPGA's and electronics and software and tools. If you want to know what FPGA is and why it is the most universal electronic component you should read "FPGA Bible".

I want to enter the history books as a boy who wrote two Bibles. My name is Antti.

"Writing is perhaps the greatest of human inventions,  
binding together people, citizens of distant epochs, who never knew one another.  
Books break the shackles of time.  
A book is proof that humans can work magic."

Carl Sagan
